DETAILED ACTION

Claims 1-7 are pending as originally filed.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-7 are rejected under 35 U.S.C. 102(b) as being anticipated by Monroe et al (US 5,879,558).

Monroe teaches a method of assembling a reverse osmosis system to have the concentrate water routed to another water source such as hot water (figures, abstract), and restricting the concentrate water flow with a restrictor (a check valve: see column 3 lines 34-65.

Re the flow restrictor, Monroe teaches that the original design flow restrictor is no longer necessary in column 3 lines 18-33, it is replaced with the check valve, which inherently has a higher flow rate in that it flows almost full flow in the forward direction, yet prevents (restricts) the backward flow.

Monroe teaches a pump and the pressure sensing switch as claimed – column 3 lines 47-65. A pressure sensing switch – automatic shut-off – turns off the water when the RO water tank is full – see column 4 lines 1-10.

Art Unit: 1723

With respect to the limitation "retrofitting", the retrofitting is anticipated in the Monroe teaching, which is a modification of the well known reverse osmosis system wherein the concentrate water is routed to the drain – see abstract.
